EXCHANGER

- Changing several currencies into one basic currency
- Acceptance of banknotes of various currencies
- Payout of banknotes and coins of the basic currency plus receipt

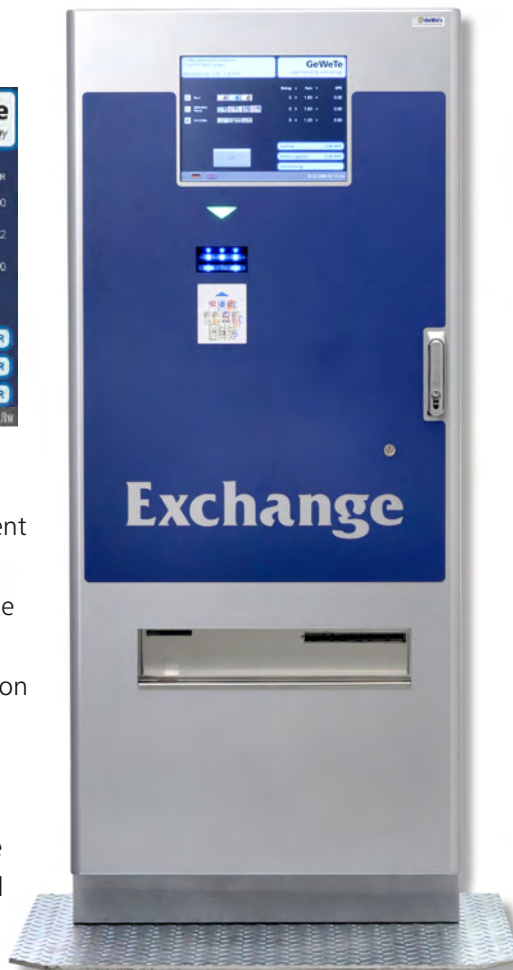

Money changing systems | Cash handling and payment systems
 Cash machine systems | Service machines
 Customer-specified solutions

The "Exchanger" application enables the changing of banknotes of different currencies into one basic currency (banknotes and coins). The adjustable **exchange rates** and the stored **exchange fee** are thereby displayed on the user oriented desktop.

Several banknotes of different **currencies** can entered one after the other without sorting. The converted cash-out sum is displayed in the basic currency on a large LC-Display with the exchange fee already deducted.

In order to avoid residual amounts that cannot be cashed out, the exchange fee must be mathematically adapted accordingly.

The exchange process is then started by **clicking** on the OKAY button once. The customer receives the banknotes and coins in accordance with the calculated cash-out sum plus receipt.

For accounting and the adjustment of exchange fee and exchange rate a **separate user interface** can be invoked on the machine. The statistics of the machine can be printed out with the integrated printer. The **sales statistic** is saved to a **USB-stick** at the same time.

The **hard- and software** of the "Exchanger" system is, as is necessary for this kind of machine applications, of very robust design.

Years of experience in the development and production of thousands of machines is reflected by this application.
